Art Unit 2609

PU030103
Customer No. 24498

18. (New) The computer readable medium of claim 15, wherein removing session information for the wireless client is performed by the wireless access point in response to a command sent by the gateway to remove that session information.

19. (New) The computer readable medium of claim 15, wherein removing session information for a wireless client is performed automatically by the wireless access point removing idle wireless client session information entries for the wireless client after a predetermined period of inactivity of the wireless client.

Amendments to the Abstract

Please **amend** the Abstract as follows:

A system, method, and computer readable medium for enabling roaming of wireless client stations among wireless access points, wherein a ~~are disclosed.~~ A gateway programmed to receive session data requests is provided in a network, which comprises access points that ~~which~~ are programmed to send session data requests to the gateway. The gateway sends session information setting commands to the requesting access point, or sends a session data failure response to the access point.
